A Transient's Thoughts About Crews & Skippers

Our editor, Stu Anderson, thinks in past years there have been too many articles in the year book about "Choosing a Crew" or "Things a Skipper Looks for in a Crew." In Stu's inimitable gimmick fashion he decided what we needed for a change of pace this year, was an article about what free lancing crews looked for when choosing a skipper plus a few added sidelights on the advantages of crewing over skippering.

Before getting involved in any discussion about the crew's point of view, let's establish the fact that there are different types of crewmen (other than good and bad). Most of them should fall into one of the following categories:

REGULARS: Sail on the same boat most of the time. LEARNERS: Sail to acquire knowledge so they can buy their own boat.

SKIPPERS: Sail as crews on other boats for important races.

PROFESSIONAL CREWS: Not paid hands but just people who prefer to crew and like "sail-boat bumming."

Some of the arguments in favor of joining the ranks of the final category are included in this article.

For lo many a year, skippers have had problems finding and keeping good crews. Many skippers "set-up" crews months in advance for regattas and districts and those who don't sometimes find themselves without experienced help. This situation seems to be quite normal and it would seem in this case it might be better to be the quarry rather than the hunter.

Now, as for "How to Choose Who to Get Caught By:"

Skippers come in various sizes, shapes and temperaments. Size and shape is of little matter but temperament is all important. There are skippers like Stu "Pull up the Board, Put up the Pole—Hike" Anderson who really wants a tall octapus. There's also the Jack "That Was the 5 minute Gun, Change the Main" Swanson type, And, of course, there are skippers like Karl Smither who never seem to get excited.

Some skippers prefer a crew who tells them how the competition is doing or if they can beat a starboard tacker; others who want crews to just sit and only do what they are told to do.

Vagabond crewing allows you to sail with all types and allows you to "borrow" from their fund of information.

After an extensive survey among the "pros" we've come up with what should be a handy guide of stock phrases by which you can rate your skipper—

UNFAVORABLE:

"That port cleat doesn't work all the time."

"Your hiking strap is frayed but still good."

"I know that pulley is in the wrong place and I'm going to move it."

Lightning Needs By A Lightning Skipper

For Information Write:

DICK J. CARREL

38 Forest Hill Drive Buffalo 21, N.Y.

The World's Finest Lightning Trailer

"I'll tell you when to adjust the sails."

"My compass is being repaired."

"Watch that seat, it's split."

"It'll last for the rest of the season."

FAVORABLE:

"That was a good job, have a beer."

"I've got new 5/16 heavy weather spinnaker sheets."

"That was a good job, have a beer."

"I've got new light weather jib sheets."

"That was a good job, have a beer."

"We've got accommodations with a friend of mine for the regatta."

"That was a good job, have a beer."

"I've just checked all the cleats and they work fine."

"That was a good race, have a beer."

As for a top-notch skipper's qualifications, they probably match just what he's looking for in a crew. Sportsmanship, punctuality, the desire to win, sense of humor, an acquaintance with the rules, ability to hike, knowledge of tactics, a little info, drive and determination.

If you find a skipper with most of the above qualities.

hang on to him, he'll probably end up champ.

Now that you've joined the union, here's a word of warning. Skippers sometimes delegate the authority to call the lay line for the marks. If you don't lay it, he snarls, "Ready About." If you overstand just a little, he just snarls. If you lay it right on the button he figures that's your job. If, however, he calls the lay line and misses—there's been a wind shift.

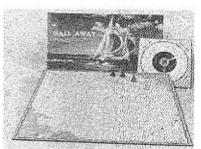

Never argue.

SAIL AWAY

A RACING GAME

The BEST way to teach or learn racing tactics and rules. Wind shifts, puffs, blanketing effect, even "capsize" built right in the game. The tactics of rounding warks, starting, finishing, covering, all must be used

in playing the game, It's similarity to actual racing is a mazing! This is not a game of chance—you decision at each move.

10th ANNUAL MARINE FROSTBITE REGATTA

Oct. 20-21, 1962 Quantico, Va.

STUART ANDERSON AND "GLOCKENSPIEL" SOLVE TRICKY WINDS AND BEAT NINETY-THREE OTHER BOATS AT QUANTICO

By Barney E. Mead, III

There is at last no doubt about it-interest is dying in our class. Only ninety-three Lightnings were on the starting line at the Quantico Tenth Annual Regatta sailing on the Potomac River on October 20 and 21 at the Marine Corps School. Except for the threat of a hurricane, the number of Lightnings on the starting line would probably have exceeded one hundred (100). This regatta, as far as anyone in the Lightning Class knows, is the largest one of its kind in the history of yachting in the world. Last year at Quantico there were ninety-six (96) Lightnings on the starting line,

The Marine Corps School conducted a fine regatta in probably the worst wind conditions in the history of the regatta. Except for the lack of wind everyone had a marvelous time. It is difficult to describe the thrill of starting a race with over ninety (90) other Lightnings all trying to get the perfect start. Lightnings came from all over the Eastern seaboard and as far West as Michigan and Ohio. In all, twelve states were represented.

The first race was scheduled to start at 11:00 a.m., but did not start until about 12:00 because of light, variable northwest winds of under 5 mph. The race chairman, Walter Collier, set the line for a perfect weather start and everytime the line was set, the wind would change. Finally, after moving the line several times, the race started. Scheduled twice around a triangle plus a weather leg, the weather end of the line was definitely favored. Barney Mead in Clancy got clear first and led the first part of this leg. Frank Williams, from Washington, D.C., was in second place and Stu Anderson, from Buffalo, was in third place. The air on the weather leg got lighter and lighter and then began to get patchy. Frank Williams to leeward took the lead and then Stu Anderson to weather of both Williams and Mead got into a patch of air and sailed into first place. At the weather mark, it was Anderson, Williams, Dick Armstrong, Mead and Mark Auer.

The second leg was a spinnaker run and as the boats rounded the weather mark, the wind dyed almost completely. This leg was sailed with most spinnakers collapsed. A puff of wind would come, the spinnaker would fill, and shortly thereafter would collapse again. Stu Anderson, in first place, did an outstanding job of spinnaker flying and increased his lead. At the second weather mark, it was Stu Anderson in Glockenspiel, first. John Sprague, who had moved up from tenth at the first mark, was second; Barney Mead was third. Dave Bruce, from Baltimore, who had sailed around almost twenty boats, rounded fourth and Earl Engler, in Slave Driver, rounded fifth. At this mark, the race was shortened to one lap because of the light air. It should be said at this point that on the second leg the current helped carry the boats to the mark. During the first leg, the tide had been coming in nullifying the effort of the current but the tide had now

changed and was running at a strong rate with the current. The next leg was a close spinnaker reach across the Potomac followed by a short beat to the finish line against the tide and current. The positions of the first five boats did not change at the third mark or the finish with Stu-Anderson getting the gun with a good lead at 2:10 p.m. The fleet was then towed across the river for lunch by the many helping Marine power boats and other spectator boats with the second race scheduled for 3:30 p.m.

An attempt was made to start the second race at 3:45 p.m. but after the gun had gone off, the wind had switched to a point that the weather end was so favored it was impossible to get a start with ninety-three (93) boats. The line was changed and a second start was attempted. The wind for the second race had swung 180° and was blowing 4 mph from the South and getting lighter all the time. The tide and current were running strong to the South carrying boats over the line at a rapid rate. So many boats were over at the starting line that a general recall was sounded. The next start was almost as bad, but because of the lightness of the wind

conditions and the late starting time and the impossibility of calling the many boats that had been carried over the line by the tide and current, the race started. This race was shortened to one lap at the start. The boats that went out into the middle of the river seemed to make out best. At the first mark, it was Bob Seidelmann from New Jersey in first place followed by Stu Anderson and Howard Mullin. The next leg was a close reach across the river. Marcy Lippincott and Barney Mead flew spinnakers on this leg and both picked up many boats. The next leg was a true down wind spinnaker run with some of the ninety-three (93) boats going up the Maryland side of the river and some going up the Virginia side of the river. The Maryland shore was favored. At the finish line, it was Bob Seidelmann first, Stu Anderson second, Floward Mullin third, Earl Englet fourth, John Walton fifth and Barney Mead sixth. That evening there was a cocktail party at Harry Lee Hall followed by the best dinner ever eaten by ninety-three (93) Lightning Skippers and their crew. Dinner was followed by a dance and some pretty wild twisting. About 2:00 a.m. there was a late party in Ken and Millie Lawyer's room. Have you ever seen forty (40) people in one room at the Hostess House at Quantico?

To get back to racing—as of Saturday night after two (2) races counting low points, Stu Anderson was in first place with two and three quarter (2¾) points. Earl Engler and Barney Mead tied for second with nine (9) points and Jim Allen, from Westport, Connecticut, was in fourth place with twenty-eight (28) points. The prediction for Sunday was clear, winds ten to twenty miles per hour from the North.

Sunday morning was rainy and there was little or no wind. The tace started at 11:00 a.m. with winds approximately 3 mph from the South. The wind continued to lighten. Half the fleet crossed the river against the tide to the Maryland shore. The other half tried to get out of the tide on the Virginia shore. The boats that went to the Maryland shore never completely ran out of air and although they had to cross the tide twice, in general made out better. Meanwhile on the Virginia shore (that is where we were), the wind stopped completely and anchors had to be put out to protect windward distance since we were sailing against the combination of the current and tide. This race did much to upset the leaders of Saturday night. Stu Anderson finished 23rd, Earl Engler finished 30th, and Barney Mead finished 40th. All during the race the wind went from 4 mph to 0 at various times and positions changed drastically depending on the wind and where it happened to be blowing. Arnold Schwartz, from New Jersey, was the first boat to the weather mark and led the race all around the course until the last short beat to the finish line where Jim Carson, from New Jersey, took the lead and got the gun. Schwartz was second, Marty O'Meara, our illustrious president, was third. Jim Burke, from Washington, D.C., fourth and David Peterson fifth.

Despite his third race finish Stu Anderson still had the necessary points to win the regatta with Earl Engler second. Dave Peterson was third, Marty O'Meara was fourth and Barney Mead fifth.

If you have not raced your Lightning at Quantico, you have not lived. This is something you must experience to believe. I think I know how General Custer felt at the Little-Big Horn when he said, "Looking at all those *-!*-!*-! indians." You should see over ninety (90) Lightnings on a starting line.

HOW TO IMPROVE

By Erik Schmitt

3rd in 1961 Lightning World's Championship 1st in 1961 Snipe World's Championship

Erik Schmitt sailing Osprey VIII Sugar Loaf-Guanabara Bay, Rie

I have had a few years of experience in yacht racing. There are a lot of things to be said about yacht racing. These basic rules can be easily learned by reading the many good books concerning this matter which are available all over the world. However, right or wrong, every skipper has his personal way of sailing and own ideas of tuning his boat.

Every skipper has to start from the very bottom. I haven't heard of one that started sailing winning races, yet he can learn, practice, and if he does it the proper way, he will be soon up there giving trouble to the old experienced one that thinks there is nothing more to be learned.

Never be shy to ask advice from somebody that is beating you frequently. If that adversary you ask advice refuses to give out his secrets, he will only be fooling himself. If he does help, you will progress, thus giving him a more rigorous competition and consequently end up by improving him up to a higher degree of competition. Try matching with him before the races or whenever he is out. If he happens not to sail very often, ask him why. Maybe he does not go out because nobody else does.

Another important fact to improve your racing is to recognize your own error to be able to correct it. After the race is over, if you happen to have lost, try and remember all the details. How you could have passed the boat that came ahead or how could you have prevented

the other one from passing. Conclusion: never be stubborn in this respect. I have an excellent technician, my father, who watches almost all the regattas I sail. After every race, if I win or lose, he always has some constructive criticism.

Once you are at the top of the fleet, don't relax neither be too sure of yourself otherwise you will end up as a terrace sailor while all the others are training to improve. If you want to be good at sailing you must take it serious. Whenever you have spare time go out on your boat with your same crew. Do individual training or preferably brush racing against your hardest competitors. Get that machine of yours working and moving. Place certain fittings on their proper place where your crew can work haudily without having to grumble that the manoeuvre wasn't good because the fitting didn't work. One good example of this type is the spinnaker pole fittings. They never seem to work properly mainly because no-body cates to oil them once in a while.

If you have the time, try to sail all the races of the annual program. It is important to have contact with the boat, whatever class it may be, as long as the good skippers are there.

In Brazil the Snipe and the Lightning class are very popular and the toughest competition is definitely held on them. I am sure that the results of the last World's championships corresponded to the degree of competition which these excellent sailors gave us. Besides this, for the past three years I have sailed an average of 76 races in various classes per year, which I can attribute as the principal reason of my progress. Still, I don't think it is enough because we don't have sufficient international competition due to our geographical and financial difficulties.

Fitted Cockpit Cover \$25.00 Postogo Poid

A Lightning Cover of tried and proven design made of heavy Army Duck and treated with the best water and mildew repellent finish obtainable.

Check These Extras!

- 1. A bolt rope sewed in around edges for extra strength
- 2. A snug must collar keeps rain out
- 3. A boom tip tover included
- 4. Enclosed front snap fastened
- 5. Double thickness at boom and stress points
- 6. Brass grammets used throughout

Fitted cover for the entire deck \$50.00 Postage Paid

Fits over the boom and ties or snops under the rub rail
with snops provided

Fitted trailing cover

\$60.00 Postage Paid

Two Styles covering deck and sides ---

Style A straight trailing or winter cover, no openings on top.

Style B used with most up or down; has most collar and flaps which close openings when trailing.

Satisfaction Guaranteed!

SOME SKIPPERS

by Stu Anderson and Cal Schmiege

.... take spinnakers down on windward side to be on correct side for next use—also sometimes because they think this is safer than down to leeward.

.... raise spinnakers behind shrouds—some ahead

of shrouds.

. . . . rather than pull spinnaker halyard around forestay when it is on wrong side, throw it around with a ball or weight on the end.

..... use a single wire spinnaker halyard thru tube in mast connected to drum below deck which has reverse ratio by pulling 7 feet of line from smaller drum raise spinnaker to top.

.... have a handle or line attached to centerboard to pull it down when it sticks while being lowered on

some points of sailing.

board trunk to make it rigid—washers on stop pin so when lowered into centerboard trunk it won't move from side to side—make sure board moves freely on lower centerboard pin so forward edge of board is pushed to windward a small amount when beating to windward.

. . . . run spinnaker sheets thru after deck so deck

is clean and smooth for hiking.

have a bow line that retracts thru hole in stem.
have centerboards and rudders painted white to more easily see weeds. Some have glass port holes in bottom of boar to observe same.

. . . . use 45° tacking lines on deck to observe their

position with other boats.

.... use single jib sheet leads rather than double.
.... remove older centerboards and cut them to minimum tolerance for width and depth.

. . . . check to be sure they have minimum opening between skeg and rudder and minimum centerboard slot opening. Repair with fiberglass tape if necessary.

.... heel boat to windward on light dead down wind leg. Hold boom forward with shock cord giving more exposure of spinnaker as it hangs further to windward from the tilted mast.

.... use single thickness of Kleenex tissue cut in 14" wide strip (cut with grain) for light weather wind pennants.

. . . . always rig spinnaker for second leg even when in doubt, in case of wind shift. Then change it on reach to other side if not needed.

.... put board all the way down when running dead down wind with spinnaker on extremely windy day for stability.

lines marked on outer ring. Then watch a large cardinal point in relation to one of these lines which is easily seen on wet windy days even while hiking.

.... know the average number of feet per second their boat travels to better adjust their position on final

starting maneuver.

.... approach the starting parade of boats from opposite direction, analyzing the competition, and try to jibe into an opening between boats that are not aggressive starters.

and stretch them if they are tight by pulling them in hard and running their hand up leech as far as possible or

lowering jib and stretching leech over their knee.
... put tape marks or nail polish on sheets for reference points.

. . . . strengthen weak jumper struts with gussets or

a wire across the tips.

Lightning Year Books that give advice on tuning, sailing tips, etc. Also review other good books on rules, tactics,

.... take weight off boom when going to windward in extreme light weather conditions by holding up boom with crutch from centerboard trunk and by attaching spinnaker halyard to center of boom on windward side. This

is to give better shape to mainsail.

heavy wind and wave conditions, heave to, pull jib tight, then tack and leave jib sheeted in on weather side. This gives the boat a nice comfortable, slow, movement on the new tack. Push tiller down and boat will make a slow drift across wind. Water doesn't splash in boat and the crew can relax and rest until time of start.

..... use 1/4" tubes thru mast for main, jib and spin-

naker halyards instead of sheaves.

. . . . have spinnaker fittings facing down on spinnaker pole to make it easier to drop guy line when taking spinnaker down to windward.

..... have hiking straps made in separate loops for each crew, looped up and running fore and aft and stiff enough to hold their position to make them easy to get feet under.

..... use a drum type boom vang mounted on mast step in front of mast, with vang running directly thru 1/4" tube thru mast.

of the centerboard trunk to hold excess sheet and guy lines. Similar reel arrangement mounted on mast step may also be used for spinnaker halyard.

LET'S ALL BE

SAILS - SENSE

"Stu's got it!"

VICTORIOUS OVER 93 CONTESTANTS in the 1962 Frostbite Regatta at Quantico, Va. and the Frigid Lightning Regatta at Baltimore. Stu Anderson, Niagara Sailing Club, also won the Niagara River Championship and placed 5th in the World's Championship with a 15-year-old boat, using 4-year-old Boston sails exclusively.

A GOOD LIGHTNING DESERVES THE BEST
